

Rice / Paddy Thresher is tractor PTO driven and can be used with separate Diesel Engine as an option. Best alternate for those who are operating manually. Operation of this Thresher depends upon the Axial Flow System.

| DETAILS                   | MODEL                          |
|---------------------------|--------------------------------|
|                           | AGM/RT/2T                      |
| Grain Out Put Capacity    | 1.5 to 2 ton/hr                |
| Cleaning Efficiency       | Less than 99%                  |
| Grain Breakage            | Almost Nil                     |
| Length (cm)               | 330                            |
| Width (cm)                | 187                            |
| Height(cm)                | 181                            |
| Threshing System          | Axial Flow                     |
| Operation                 | Peg Tooth                      |
| Tractor Power Requirement | Centrifugal Blower             |
| Recommended PTO Speed     | Tractor PTO Driven             |
| Labour Requirements       | 4 Persons                      |
| Alternate Power Required  | Can be used with Diesel Engine |
